

Weekly Report

17/01/2019 – 22/01/2019

Regarding the situation of CCTV UK Brexit project, I report to you last weeks both in WeChat and the weekly report. After that, the UK part decides to hire a Chinese company in the UK to deal with animation in video production by using specific animation tools like Adobe toolset. So our team will deal with our animation visualization on the web but no need to record as a video anymore.

The reason of record screen as a video still does not work because the resolution, transparent background, and video production process. Even we try closely many ways with an English video production company, but it does not work.

So, the tasks of our team are currently doing as follow

- 1) visualize 10+1 visualizations on the web
- 2) adding the news scripts to our visualization with some animations (This is not full animation for video production like we did before)
- 3) export static SVG on demands for the Chinese company as I mentioned above.

One more thing, we rearrange the communication people to deal with the UK team, Siyi and Xinyi will communicate with their senior (Linhao and Xv Ying), and then the senior or I will contact the UK part directly.

About my rejected paper, I'd read the comments of reviewer 2 carefully. It is excellent suggestions, and I will revise my paper's structure based on those comments. Moreover, I'd talked with my second author, and he will help me to edit the paper. The way to modify my paper is emphasizing the "modern" topics of recent papers we reviewed and analyze more paper of the year 2018. I've planned to finish the new version within March. By the way, I will send you as possible as we have an update.

Ps. I will go back home 1.24 - 2.21, I'd planned to work at home.
